SUMMARY

Blue team–focused security analyst combining CySA+, SSCP, and Security+ certifications with hands-on SIEM detection labs (Splunk, Microsoft Defender), a year of GRC audit experience across NIST and ISO frameworks, and a decade of customer-facing IT operations. Currently sharpening automation and scripting skills in a data-pipeline role; seeking a SOC Analyst position on the front line of detection and response.

CERTIFICATIONS

CompTIA CySA+ • CompTIA Security+ • ISC2 SSCP • CompTIA PenTest+ • CompTIA Network+ • CompTIA A+ • CompTIA Project+

TECHNICAL SKILLS

Detection & response: Splunk, Microsoft Defender, Sysmon, Wireshark, MITRE ATT&CK, CVE/CVSS analysis

Scripting & automation: Python, PowerShell, Bash, SQL, Ruby

Infrastructure: Active Directory, Windows 10/11, DNS, DHCP, FortiGate, Palo Alto firewalls, Kali Linux

Governance: NIST, ISO, and SOC audit frameworks; control testing; audit evidence collection

DETECTION LAB & PROJECTS

Home lab and platform-based work (HTB, TryHackMe, VulnHub)

- Detected and investigated brute-force, phishing, and malware activity in a Splunk home-lab SIEM, escalating true positives and documenting containment steps
- Performed initial triage of simulated incidents by correlating Sysmon telemetry in Splunk and Microsoft Defender, mapping findings to MITRE ATT&CK techniques
- Built and tested FortiGate and Palo Alto firewall policies segmenting AD servers, workstations, and printers; analyzed traffic to validate indicators of compromise
- Ran a controlled GoPhish phishing simulation from Kali Linux to measure click-through and strengthen security-awareness recommendations
- Wrote Python, PowerShell, and Bash scripts to scan for network vulnerabilities and automate repetitive checks prone to human error

EXPERIENCE

Technical Specialist — TEKsystems contracted to DoorDash

June 2026 – Present

- Develop and maintain automated data-transformation pipelines in Python and SQL, validating outputs and deploying them to client environments
- Script repeatable workflows that replace error-prone manual steps using MODE queries written in SQL to remediate errors in merchant data
- Resolved client data errors using JIRA and Salesforce to customer satisfaction, resolving 30 tickets a week

GRC Analyst / Product Specialist Intern — Continuum GRC

Jan 2025 – Feb 2026

- Maintained regulatory compliance documentation mapped to NIST, ISO, and SOC frameworks, keeping control implementation consistent across environments
- Supported internal and client audits by collecting control evidence and validating documentation against control requirements, keeping audit cycles on schedule
- Tested system configurations and business processes to surface control weaknesses, feeding findings into remediation plans

IT Support Specialist (promoted from Water Technician) — ADT Restoration

May 2012 – Apr 2023

- Administered accounts, permissions, and group policies in Active Directory, enforcing least-privilege access across the company network
- Troubleshoot Windows 10/11 endpoints and core network services (DNS, DHCP, Wi-Fi) to root cause, restoring availability while minimizing user downtime
- Prioritized competing incidents by business impact and de-escalated high-stress customer situations across 11 years of front-line service

EDUCATION

B.S., Cybersecurity and Information Assurance — Western Governors University

Feb 2026
